

GRManagement GmbH operates in the EAEU and European markets in the following areas:

- ❑ Organization of supply of modern agricultural equipment for pig breeding, cattle, small ruminants, poultry farming, including penning systems, equipment for slaughtering, drinking, feeding, ventilation, heating, manure removal systems, floor and cage housing systems for industrial poultry, egg processing equipment, gear motors, consumables for insemination and identification of animals, industrial greenhouse film and much more;
- ❑ Organization of supply of agricultural machines: tractors, loaders and various attachments, tractor auto steering systems, agricultural drones for cultivating fields and monitoring the condition of crops;

- ❑ Organization of supply of highly productive purebred breeding farm animals, including pigs, beef and dairy cattle, small cattle (sheep and goats), horses. Training in animal genetics, breeding value estimation with the BLUP method (GBLUP & Single Step GBLUP), crop production, poultry farming, feed production, veterinary medicine and animal science.

- ❑ implementation of modern BLUP technology and genomic selection (GBLUP and Single Step GBLUP) of farm animals to achieve high genetic progress i.e. improvement of production economically important performance of animals, reduction of production costs of pork, beef, milk, including quality management and production of own replacement breeding stock;
- ❑ implementation of modern specialized software using advanced BLUP breeding value estimation technology (GBLUP & Single Step GBLUP) and genomic selection for managing livestock, as well as the quality of agricultural products produced by the livestock, with subsequent installation of the specialized software on the customer's server, which makes them independent of the foreign purchase of breeding stock.
